IS53007D: Computing Project (2017-18)
**Computer Science BSc**
Goldsmiths College, University of London

Weekly Log

Jordan Brannan - 33482272

Date - 07/02/2018
Supervisor - James Ohene-Djan

This week, basic mockups were created using mockflow.com for the web app and mobile app. The web app main page demonstrates how the messages from the mobile app to the institution will be viewed. As you can see from the following design, this essentially means that conversations can be selected on the left hand side and viewed in the main window.

Designs for the mobile application include a splash page for users to initiate conversations and the page for the messages.

Over the next week, I will be contacting a school to submit a survey to help with the continuation of this project
