IS53007D: Computing Project (2017-18)
Computer Science BSc
Goldsmiths College, University of London

Weekly Log

Jordan Brannan - 33482272

Date - 28/02/2018
Supervisor - James Ohene-Djan

After the completion of the high fidelity digital prototypes last week, progress has been made to implement these designs using Ionic Creator.

Basic pages have been implemented including;

- The splash page
        - Privacy
        - Terms of Use
- Conversations Page
- Start a New Conversations Page
- View a Conversation Page

To test the application, a database was created using firebase as this required little to no integration because it was already offered by Ionic Creator.

This coming week, progress will be made to create a two way API to feed information to and from an external server using a MySQL database. UI implementation will also be continued for the application to format how this data is populated within the mobile application and an early look into the web application will be made.
